The Circuit Breaker Size for a 230 Volt Air Conditioner. Kevin, according to the specs for the air conditioner the circuit that should be installed would be a 30 amp 230 volt circuit using 10/2 cable with ground. The circuit breaker for this air conditioner circuit should be a 2-pole 30 amp breaker. More about Electric Circuit Wiring for a 230 Volt Air Conditioner.

Installing a 230 Volt Air Conditioning Circuit
How to Wire a 230 Volt Air Conditioner. Hi Lori, let's get you cooled down! All that is needed is to convert the existing circuit from 20 amp to a 15 amp. This involves replacing the 2-pole 20 amp circuit breaker with a 2-pole 15 amp circuit breaker and replacing the 20 amp outlet with the appropriate 15 amp 220 volt female outlet that matches the male plug that came with the air conditioner.

230 Volt Air Conditioner Wiring - Ask-The-Electrician
Single-phase motors are used to power everything from fans to shop tools to air conditioners. Residential power is usually in the form of 110 to 120 volts or 220 to 240 volts. Wiring a motor for 230 volts is the same as wiring for 220 or 240 volts. Some motors allow both 120-volt and 240-volt wiring by providing a combination of wires for doing so.

The 120V or 230V AC load (i.e. fan and lights etc) is connected to the UPS output terminals. The whole system can light up both AC and DC loads at the same time. Keep in mind that use the rated and well designed system according to your needs as you know that a single PV panel and battery won't support that much load.

I'll try to clarify things. With AC current, the voltage changes direction 60 times per second (60 hertz) in the US and 50 hertz in Europe. The hot wire (black or red, typically) is the "pump" that pushes or pulls. The neutral is a path for the "pushed or pulled" current to return.

electrical - Why Do 240V Circuits Not Require Neutral ...
But we know that battery is a DC source. In our home, all electrical equipment made for 230V AC supply. So we need 230V AC supply to run our electrical equipment during load shedding. The inverter in our house is a device which takes 12V DC supply and gives 230V AC Supply. So Inverter is a circuit or you can call a device which converts DC to AC.
