The 1965 Ford 289 small-block engine was equipped with a single timing chain that connected the crankshaft to the camshaft to ensure that the two components rotated in unison. At the tip of the front of the camshaft is a single gear that meshes with a gear on the bottom of the distributor. Even if the timing chain is installed properly, the distributor must be correctly positioned to ignite the spark plugs at the right time.

Instructions for Ignition Timing in a Ford 289.

Ford's 289-cubic-inch V-8 is the second engine in the 90-degree V-8 series of engines, which began with the 221-cubic-inch V-8 in 1962. The 221 was followed by the 260 in 1963. Ford increased the stroke of the 260 to 3 inches to make the 289 in 1964.

Instructions for Ignition Timing in a Ford 289 | It Still Runs

Ford first introduced the 289 V8 engine in 1963 and it was the third engine to appear in the popular Windsor line. The 289 was the most famous and highly desire engine used in the popular Ford Mustang built before 1968. (Unless you want to embarrass yourself by admitting you wanted a 200 Inline 6). It was also used in the Ford Falcon and some ...

Ford 289 V8 Engine Specs, Firing Order and Information ...

All 1963-1968 Ford 289 V8 engines had the timing mark located 45 ° to the left of center, with the engine at TDC. (This is the left side of the engine, not the observer). There was a timing pointer...

What are the timing marks on the 289 ford engine? - Answers

Keep in mind that a short stroke high revving engines (ala' a hot 289) can accept, up to a limit, more total timing than a long stroke engine (stroker 393-408-427 SBF). As to generally accepted "hot rodding" principles, the total curve should come in a no more than 3,000 rpm and the lower the better. A low limit, again IMHO, should be 2,200 or so.

Advance curve - total timing - FordWindsor

The easiest way is to have a shop find out what the timing curve is inthe distributor and then set the initial timing to provide for an overall maximum advance of 34 degrees before top dead center. The cheap way is to disconnect the vacuum advance hose and plug it and then set the timing at 34 degrees with the engine running at 3500 rpm.
