Applies To: Windows Server 2016, Windows Server 2012 R2, Windows Server 2012. By deploying Windows Server Active Directory Domain Services (AD DS) in your environment, you can take advantage of the centralized, delegated administrative model and single sign-on (SSO) capability that AD DS provides. After you identify the deployment tasks and current environment for your organization, you can create the AD DS deployment strategy that meets your organization's needs.

AD DS Design and Planning | Microsoft Docs

When you design an Active Directory logical structure before you deploy AD DS, you can optimize your deployment process to best take advantage of Active Directory features. To design the Active Directory logical structure, your design team first identifies the requirements for your organization and, based on this information, decides where to place the forest and domain boundaries.
