Acute coronary syndrome is a syndrome due to decreased blood flow in the coronary arteries such that part of the heart muscle is unable to function properly or dies. The most common symptom is chest pain, often radiating to the left shoulder or angle of the jaw, crushing, central and associated with nausea and sweating. Many people with acute coronary syndromes present with symptoms other than chest pain, particularly women, older patients, and

[Wikipedia](#)

Overview. Acute coronary syndromes encompass a spectrum of conditions which include unstable angina, and myocardial infarction with or without ST-segment elevation. Patients with different acute coronary syndromes may present similarly; definitive diagnosis is made on the basis of clinical presentation, ECG changes, and measurement of biochemical cardiac markers.

By Eric Topol, The 12-Lead ECG in Acute Coronary Syndromes describes how to accurately interpret 12-lead ECGs for effective recognition and treatment of patients experiencing ACS. This 3rd edition simplifies learning with a new three-step method for interpreting 12-lead ECGs, first exposing you to new information, then offering examples, and finally asking you to apply your knowledge.
