of how we got here,
and it will hold the
food giants
accountable for the
social costs that keep
climbing even as
some of the industry's
own say, "Enough
already."

Mitochondria are
sometimes called the
powerhouses of
eukaryotic cells,

Get Free Answers For because mitochondria

are the site of ATP synthesis in the cell.

ATP is the universal energy currency, it provides the power that runs all other life processes. Humans need oxygen to survive because of ATP synthesis in mitochondria. The sugars from our diet are converted to

carbon dioxide in
mitochondria in a
process that requires
oxygen. Just like a
fire needs oxygen to
burn, our
mitochondria need
oxygen to make ATP.
From textbooks and
popular literature one
can easily get the
impression that all
mitochondria require
oxygen. But that is

Get Free Answers For Classical Bacterial

not the case. There are many groups of organisms known that make ATP in mitochondria without the help of oxygen. They have preserved biochemical relicts from the early evolution of eukaryotic cells, which took place during times in Earth history when there

Get Free Answers For OpenStax

was hardly any oxygen available, certainly not enough to breathe. How the anaerobic forms of mitochondria work, in which organisms they occur, and how the eukaryotic anaerobes that possess them fit into the larger picture of rising atmospheric oxygen during Earth history are the topic
