Merida, newly appointed executive editor for The Times, plans to expand the audience of the paper and diversify the subject matter to include comedy, poetry, music and live events. In an interview ...

The twenty-first century has seen a breathtaking expansion of statistical methodology, both in scope and in influence. 'Big data', 'data science', and 'machine learning' have become familiar terms in the news, as statistical methods are brought to bear upon the enormous data sets of modern science and commerce. How did we get here? And where are we going? This book takes us on an exhilarating journey through the revolution in data analysis following the introduction of electronic computation in the 1950s. Beginning with classical inferential theories - Bayesian, frequentist, Fisherian - individual chapters take up a series of influential topics: survival analysis, logistic regression, empirical Bayes, the jackknife and bootstrap, random forests, neural networks, Markov chain Monte Carlo, inference after model selection, and dozens more. The distinctly modern approach integrates methodology and algorithms with statistical inference. The book ends with speculation on the future direction of statistics and data science.

Degradation, dehumanization, instrumentalization, humiliation, and nonrecognition – these concepts point to ways in which we understand human beings to be violated in their dignity. Violations of human dignity are brought about by concrete practices and conditions; some commonly acknowledged, such as torture and rape, and others more contested, such as poverty and exclusion. This volume collates reflections on such concepts and a range of practices, deepening our understanding of human dignity and its violation, bringing to the surface interrelationships and commonalities, and pointing to the values that are thereby shown to be in danger. In presenting a streamlined discussion from a negative perspective, complemented by conclusions for a positive account of human dignity, the book is at once a contribution to the body of literature on what dignity is and how it should be protected as well as constituting an alternative, fresh and focused perspective relevant to this significant recurring debate. As the concept of human dignity itself crosses disciplinary boundaries, this is mirrored in the unique range of perspectives

brought by the book's European and American contributors – in philosophy and ethics, law, human rights, literature, cultural studies and interdisciplinary research. This volume will be of interest to social and moral philosophers, legal and human rights theorists, practitioners and students.

'Grounded theory is a highly influential way of working with qualitative data and Kathy Charmaz is a major player, both innovative and fluent. This book is a model student text: lively, carefully argued and full of vivid illustrations. Beginning students and professional researchers will find it to be required reading' - David Silverman, Professor Emeritus, Sociology Department, Goldsmiths College and Visiting Professor, Management Department, King's College, University of London Kathy Charmaz is one of the world's leading theorists and exponents of grounded theory. In this important and essential new textbook, she introduces the reader to the craft of using grounded theory in social research, and provides a clear, step-by-step guide for those new to the field. Using worked examples throughout, this book also maps out an alternative vision of grounded theory to that put forward by its founding thinkers, Glaser and Strauss. To Charmaz, grounded theory must move on from its positivist origins and must incorporate many of the methods and questions posed by constructivists over the past twenty years to become a more nuanced and reflexive practice. Essential reading for students, new researchers and seasoned social scientists alike, this book is one of those rare things, a textbook that is both accessible to those new to the field but also one that has important things to say about the nature of social enquiry itself.

Appointed by the Board of Trustees of the Unitarian Universalist Association of Congregations in 2017, the UUA Commission on Institutional Change served through June 2020. Widening the Circle of Concern: Report of the UUA Commission on Institutional Change represents the culmination of the Commission's work analyzing structural and systemic racism and white supremacy culture within Unitarian Universalism and makes recommendations to advance long-term cultural and institutional change that redeems the essential promise and ideals of Unitarian Universalism. The members and staff of the UUA Commission on Institutional Change were Chair Rev. Leslie Takahashi, Mary Byron, Cir L'Bert Jr., Rev. Dr. Natalie Fenimore, Dr. Elías Ortega, Caitlin Breedlove, DeReau K. Farrar, and Project Manager Rev. Marcus Fogliano.

Amos Tversky (1937–1996), a towering figure in cognitive and mathematical psychology, devoted his professional life to the study of similarity, judgment, and decision making. He had a unique ability to master the technicalities of normative ideals and then to intuit and demonstrate experimentally their systematic violation due to the vagaries and consequences of human information processing. He created new areas of study and helped transform disciplines as varied as

economics, law, medicine, political science, philosophy, and statistics. This book collects forty of Tversky's articles, selected by him in collaboration with the editor during the last months of Tversky's life. It is divided into three sections: Similarity, Judgment, and Preferences. The Preferences section is subdivided into Probabilistic Models of Choice, Choice under Risk and Uncertainty, and Contingent Preferences. Included are several articles written with his frequent collaborator, Nobel Prize-winning economist Daniel Kahneman.

Design has long expressed and established itself as an independent research competence – a fact that also companies, institutions and politicians have come to acknowledge. What is still needed, however, is a stronger public platform for design to confidently reflect upon this process and to establish and communicate the specific innovative and experimental dimension of design research. For this reason, BIRD, the Board of International Research in Design, has developed the New Experimental Research in Design / NERD format. The edited conference contributions of twelve young researchers from all over the world provide an impressive and diverse and insightful range of intelligent and inspiring approaches in design research, giving rise to further debate and action in the rapidly evolving field.

The Problem with Work develops a Marxist feminist critique of the structures and ethics of work, as well as a perspective for imagining a life no longer subordinated to them.

Inspired by Theodore Papanghelis' *Propertius: A Hellenistic Poet on Love and Death* (1987), this collective volume brings together seventeen contributions, written by an international team of experts, exploring the different ways in which Latin authors and some of their modern readers created narratives of life, love and death. Taken together the papers offer stimulating readings of Latin texts over many centuries, examined in a variety of genres and from various perspectives: poetics and authorial self-fashioning; intertextuality; fiction and 'reality'; gender and queer studies; narratological readings; temporality and aesthetics; genre and meta-genre; structures of the narrative and transgression of boundaries on the ideological and the formalistic level; reception; meta-dramatic and feminist accounts-the female voice. Overall, the articles offer rich insights into the handling and development of these narratives from Classical Greece through Rome up to modern English poetry.

It is now difficult to imagine that, in the years before Whitman's death in 1892, there was real doubt in the minds of Whitman and his literary circle whether *Leaves of Grass* would achieve lasting fame. Much of the critical commentary in the first decade after his burial in Camden was as negative as that in Boston's *Christian Register*,

which spoke of Whitman as someone who “succeeded in writing a mass of trash without form, rhythm, or vitality.” That the balance finally tipped toward admiration, culminating in Whitman's acceptance into the literary canon, was due substantially to the unflagging labor of Horace Traubel, famous for his nine volumes of Whitman conversations but less well known for his provocative monthly journal of socialist politics and avant-garde culture, the *Conservator*. *Conserving Walt Whitman's Fame* offers a generous selection from the enormous trove of Whitman-related materials that Traubel included in the 352 issues of the *Conservator*. Among the revelatory, perceptive, and often entertaining items presented here are the most illuminating of the *Conservator's* more than 150 topical essays on Whitman and memoirs by many of his friends and literary cohorts that shed new light on the poet, his work, and his critical reception. Also important is the richer understanding these pages afford of Horace Traubel's own sophisticated, deeply humane, and feisty views of America.
