I Highly effective strategies that help people and businesses succeed using the five elements of water, air, earth, fire, and ether. I The five elements represent emotion, mind, body, drive, and soul. I Presents case studies from Seivert's organizational and executive clients in financial services, health care, government, academics, technology, retail, and marketing. I The unique tools in The Balancing Act can be applied equally well to businesses, families, or personal relationships. Have you ever had one of those days when everything went right? When the initiatives you started at work came together like clockwork, when a family outing seemed like fun and not labor, when you and that special someone felt your relationship taking off under its own power? Those times were not accidental. They happen when the key elements of any system--a business, a family, a relationship--come into balance, and then function in a state of synergy where the whole becomes much more than the sum of the parts. In The Balancing Act, consultant and personal coach Sharon Seivert shows how you can create this magical state of affairs in your life, love, and work on a daily basis. Starting with an extensive questionnaire that lets you evaluate the health of your business, relationships, and self, Seivert teaches you how to recognize which of the five traditional elements that make up any system are in balance and which need more of your attention. Exercises and tips for nourishing each element demonstrate how you can take a proactive role in bringing your life successfully into a state of balanced harmony.

"A wonderful compendium of everything you always wanted to know about trends in women's roles:both in and out of the home. It is a balanced and data-rich assessment of how far women have come and how far they still have to go. "Isabelle Sawhill, Urban Institute "Based primarily on the 1990 population census, Balancing Act reports on the current situation of American women and temporal and cross-national comparisons. Meticulously and clearly presented, the information in this book highlights changing behaviors, such as the growing incidence of childbearing to older women, and unmarried women in general, and a higher ratio of women's earnings to men's. The authors' thoughtful analysis of these and other factors involved in women's fin de siècle 'balancing act' make this an indispensable reference book and valuable classroom resource." (Louise A. Tilly, Michael E. Gellert Professor of History and Sociology, The New School for Social Research In Balancing Act, authors Daphne Spain and Suzanne Bianchi draw upon multiple census and survey sources to detail the shifting conditions under which women manage their roles as mothers, wives, and breadwinners. They chronicle the progress made in education,where female college enrollment now exceeds that of males,and the workforce, where women have entered a wider variety of occupations and are staying on the job longer, even after becoming wives and mothers. But despite progress, lower-paying service and clerical positions remain predominantly female, and although the salary gap between men and women has shrunk, women are still paid less. As women continue to establish a greater presence outside the home, many have delayed marriage and motherhood. Marked jumps in divorce and out-of-wedlock childbirth have given rise to significant numbers of female-headed households. Married women who work contribute more significantly than ever to the financial well-being of their families, yet evidence shows that they continue to perform most household chores. Balancing Act focuses on how American women juggle the simultaneous demands of caregiving and wage earning, and compares their options to those of women in other countries. The United States is the only industrialized nation without policies to support working mothers and their families;most tellingly in the absence of subsidized childcare services. Many women are forced to work in less rewarding part-time or traditionally female jobs that allow easy exit and re-entry, and as a consequence poverty is the single greatest danger facing American women. As the authors show, the risk of poverty varies significantly by race and ethnicity, with African Americans;most of whose children live in mother-only families;the most adversely affected. This volume contributes to the national dialogue about family policy, welfare reform, and responsibility for children by highlighting the pivotal roles women play at the intersection of family and work.

Despite strong recent economic growth, Sub-Saharan Africa has levels of economic transformation, poverty reduction, and skill development far below those of other regions. Smart investments in developing skills;aligned with the policy goals of productivity growth, inclusion, and adaptability;can help to accelerate the region's economic transformation in the 21st century. Sub-Saharan Africa's growing working-age population presents a major opportunity to increase shared prosperity. Countries in the region have invested heavily in building skills; public expenditure on education increased sevenfold over the past 30 years, and more children are in school today than ever before. Yet, systems for building skills in this population have fallen short, and these shortcomings significantly impede economic prospects. In half of the countries, fewer than two in every three children complete primary school; even fewer reach and complete higher levels of education. Learning outcomes have been persistently poor, leading to substantial gaps in basic cognitive skills;literacy and numeracy;among children, young people, and adults. The literacy rate of the adult population is below 50 percent in many countries; functional literacy and numeracy rates are even lower. Systemwide change is required to achieve significant progress. Multiple agencies at the central and local levels are involved in skills development strategies, making skills 'everyone's problem but no one's responsibility.?' Policies and reforms need to build capacity for evidence-based policies and create incentives to align the behaviors of all stakeholders with the pursuit of national skills development goals. The Skills Balancing Act in Sub-Saharan Africa: Investing in Skills for Productivity, Inclusivity, and Adaptability lays out evidence to inform the policy choices that countries will make in skill investments. Each chapter addresses a set of specific questions, drawing on original analysis and synthesis of existing studies to explore key areas: I How the skills appropriate to each stage of the life cycle are acquired and what market and institutional failures affect skills formation I What systems are needed for individuals to access these skills, including family investments, private sector institutions, schools, and other public programs I How those systems can be strengthened I How the most vulnerable individuals:those who fall outside the standard systems and have missed critical building blocks in skills acquisition;can be supported. Countries will face trade-offs;often stark ones;that will have distributional impacts and a bearing on their development path. Committed leaders, reform coalitions, and well-coordinated policies are essential for taking on the skills balancing act in Sub-Saharan Africa.
