The Buick V6, initially marketed as Fireball at its introduction in 1962, was a large V6 engine used by General Motors. The block is made of cast iron and all use two-valve-per-cylinder iron heads, actuated by pushrods.

Buick V6 engine | Jeep Wiki | Fandom

The Buick V6 started its production life in the 1962 Buick Special. It was a 90 degree engine and its first displacement was 198 CID. It was dubbed the "Fireball". Buick had worked with the innovative 215 aluminum block V8 (later to be an Olds, then ultimately a Rover engine), but it was difficult to build and had its quirks.

The Novak Guide to The Buick 90 Degree V6 Engine

If you like weird twists and turns in your engine-history plot, you'll like the Buick V6. Buick engineers took their aluminum 215-cube V8, lopped off a couple of cylinders, and cast the shortened...

Engine Of The Day: Buick V6 - Jalopnik

The Buick V6 was not used after 1971 and with the gas crisis, Buick became interested in the V6 engine again. They purchased the tooling back from Jeep in 1974 and reworked the engine so it use components from the Buick 350 engine. The larger bore increased the displacement to 231 cubic inches.

Swapping a Buick V6 Into Your Jeep

In 1961, Buick introduced the first V6 engine installed in an American passenger car, called the Fireball V6 in the Buick Special, and three VentiPorts appeared on the side. This still was not tied to cylinder count however, as the V8 LeSabres continued to carry 3 Ports per side. Also during this era, Buick used what the '67 Buick GS brochure called "vertical VentiPorts" to describe trim ...
