Designing Software Synthesizer Plugins in C++ provides everything you need to know to start designing and writing your own synthesizer plugins, including theory and practical examples for all of the major synthesizer building blocks, from LFOs and EGs to PCM samples and morphing wavetables, along with complete synthesizer example projects. The book and accompanying SynthLab projects include scores of C++ objects and functions that implement the synthesizer building blocks as well as six synthesizer projects, ranging from virtual analog and physical modelling to wavetable morphing and wave-sequencing that demonstrate their use. You can start using the book immediately with the SynthLab-DM product, which allows you to compile and load mini-modules that resemble modular synth components without needing to maintain the complete synth project code. The C++ objects all run in a stand-alone mode, so you can incorporate them into your current projects or whip up a quick experiment. All six synth projects are fully documented, from the tiny SynthClock to the SynthEngine objects, allowing you to get the most from the book while working at a level that you feel comfortable with. This book is intended for music technology and engineering students, along with DIY audio programmers and anyone wanting to understand how synthesizers may be implemented in C++.

Two award-winning professors, a former admissions officer at a major university (now a counselor at a prestigious high school), and a gifted high school senior (now in the throes of the college admissions process himself) team up to offer you over 600 tips, techniques, and strategies to help you get in to the college of your choice. Comprehensive, yet easy-to-read, this book will teach you: How to size up the colleges you're considering-and come up with a coherent list. What are college nights, college fairs, and college rep visits-and how you can use each to your advantage. What are "holistic", "contextualized", and "legacy" admissions-and how each can work for you. How some schools count "demonstrated interest"-and how you can take advantage of this little-known fact. What are Early Decision, Early Action, and Single-Choice Early Action-and whether any is right for you. How to figure out the true costs of college, and what is the difference between "need-" and "merit-based" aid. What it means when colleges say they meet "100% of demonstrated financial aid" and what "loan-free" means. When and how to make campus visits-and what to do on each. How to prepare for each section of the ACT or SAT-and how to increase your scores. What admissions officers are looking for in your application-and how to give it to them. How to write the all-important Common App essay-and present your extra-curricular activities. How to prepare for an alumni interview-and present yourself in the best light. Whom to ask for letters-of-recommendation-and how to help them write the best possible letter. How to compare your final offers-and, in some cases, substantially improve them. When it's good to wait out the "wait list"-and when not. -and much, much more. When you understand the college admissions process, you can maximize your chance of success. Why not put yourself ahead of the pack?
