Vaccine Trial Center, under Professor Dr. Punnee Pitisuttithum, together played a key role in testing the vaccine in Thai children between the ages of 2 and 16 years, conducting trials that found the dengue vaccine to be safe, moderately efficacious, with an overall 81% reduction in risk of severe dengue infection. The Dengvaxia vaccine is now on the market for use in children over 9 ...

Dengue Vaccine - tm.mahidol.ac.th

The Mahidol tetravalent vaccine was also administered to children aged 5–14 yr and was also shown to be safe and immunogenic. Dengue vaccine based on this approach has been produced at the industrial level by Pasteur Merrieux Connaught. The phase I trial of this vaccine was made in the USA, by the Walter Reed Army Institute for Research.

Live attenuated dengue vaccines expressing the pre-membrane (prM) and envelope (E) proteins of each dengue serotype, which genes have been inserted in place of the corresponding genes of the YF 17D vaccine 5' C NS1 2A 4B2B NS3 4A NS5 3' prM E 1 4B 2 3 4 The surface phenotype of these vaccines is thus no longer a YF-17D one, and their

sp second generation tetravalent dengue vaccine

The Mahidol vaccines appear to be unacceptably reactogenic in children and adults [21, 23]; for this and other reasons, Sanofi Pasteur ceased codevelopment of the Mahidol formulations. Of note, no severe cases of dengue occurred in 104 Thai vaccine recipients who were monitored 5–6 years after immunization.

Conversely, this study analyzes dengue vaccines from both historic and ...

Dengue Vaccines: A Perspective from the Point of View of ...

Dengue vaccine is a vaccine used to prevent dengue fever in humans. As of 2019, one version is commercially available, known as CYD-TDV, and sold under the brand name Dengvaxia. The vaccine is only recommended in those who have previously had dengue fever or populations in which most people have been previously infected. The value of the vaccine is limited by the fact that it may increase the risk of severe dengue in those

A vaccine to prevent dengue (Dengvaxia®) is licensed and available in some countries for people ages 9-45 years old. The World Health Organization recommends that the vaccine only be given to persons with confirmed prior dengue virus infection. The vaccine manufacturer, Sanofi Pasteur, announced in 2017 that people who receive the vaccine and have not been previously infected with a dengue virus may be at risk of developing severe dengue if they get dengue after being vaccinated.
