"Descartes' Error" is a "straw man", since the idea of a disembodied "soul" is, to say the least, not taken seriously in modern scientific circles. What is missing from this book is the realization that the "self", the source of free will and the decisions we make is not to be found exclusively in our heads.

in part a treatment of the mind/body dualism question. Damásio presents the "somatic marker hypothesis", a proposed mechanism by which emotions guide behavior and decision-making, and positing that rationality requires emotional input. He argues that René Descartes' "error" was the dualist separation of mind and body, rationality and emotion.

Historically, most have seen emotions, which come from the body, as unequal with and lesser to thoughts, which are a product of the mind. In reality, though, science shows us that this way of thinking just isn't true. We learn why this is and what it means for us in Antonio Damasio's *Descartes' Error: Emotion, Reason, and the Human Brain*. This book has some interesting stories and theories.

REVIEW OF ANTONIO R.

DAMASIO, Descartes' Error:  
Emotion, Reason, and the  
Human Brain, 1994. in the  
Times Literary Supplement,  
August 25, 1995, pp. 3-4.  
Daniel C. Dennett. The  
legacy of René Descartes'  
notorious dualism of mind  
and body extends far beyond  
academia into everyday  
thinking: "These athletes  
are prepared both mentally  
and physically," and  
"There's nothing wrong with  
your body--it's all in your  
mind."

Introducing the reader to the role of the brain in emotion via the cases of those with selective brain damage, Damasio lays out an argument for what he calls the "Somatic Marker Hypothesis" which says that bodily states are what create the sensations that we associate with emotion. The title-referenced error made by Descartes will be apparent to those familiar with Cartesian dualism.
