The process of negotiation, standing as it does between war and peace in many parts of the globe, has never been a more vital process to understand than in today's rapidly changing international system. Students of negotiation must first understand key IR concepts as they try to incorporate the dynamics of the many anomalous actors that regularly interact with conventional state agents in the diplomatic arena. This hands-on text provides an essential introduction to this high-stakes realm, exploring the impact of complex multilateralism on traditional negotiation concepts such as bargaining, issue salience, and strategic choice. Using an easy-to-understand board game analogy as a framework for studying negotiation episodes, the authors include a rich array of real-world cases and examples—now updated with the results of the Paris climate change agreement—to illustrate key themes, including the intensity of crisis situations for negotiators, the role of culture in communication, and the impact of domestic-level politics on international negotiations. Providing tools for analyzing why negotiations succeed or fail, this innovative text also presents effective exercises and learning approaches that enable students to understand the complexities of negotiation by engaging in the diplomatic process themselves.

Scholars of international relations tend to prefer one model or another in explaining the foreign policy behavior of governments. Steve Yetiv, however, advocates an approach that applies five familiar models: rational actor, cognitive, domestic politics, groupthink, and bureaucratic politics. Drawing on the widest set of primary sources and interviews with key actors to date, he applies each of these models to the 1990-91 Persian Gulf crisis and to the U.S. decision to go to war with Iraq in 2003. Probing the strengths and shortcomings of each model in explaining how and why the United States decided to proceed with the Persian Gulf War, he shows that all models (with the exception of the government politics model) contribute in some way to our understanding of the event. No one model provides the best explanation, but when all five are used, a fuller and more complete understanding emerges. In the case of the Gulf War, Yetiv demonstrates the limits of models that presume rational decision-making as well as the crucial importance of using various perspectives. Drawing partly on the Gulf War case, he also develops innovative theories about when groupthink can actually produce a positive outcome and about the conditions under which government politics will likely be avoided. He shows that the best explanations for government behavior ultimately integrate empirical insights yielded from both international and domestic theory, which scholars have often seen as analytically separate. With its use of the Persian Gulf crisis as a teachable case study and coverage of the more recent Iraq war, *Explaining Foreign Policy* will be of interest to students and scholars of foreign policy, international relations, and related fields.

"A minor classic in its laconic, spare, compelling evocation by a participant of the shifting moods and maneuvers of the most dangerous moment in human history."—Arthur M. Schlesinger, Jr. During the thirteen days in October 1962 when the United States confronted the Soviet Union over its installation of missiles in Cuba, few people shared the behind-the-scenes story as it is told here by the late Senator Robert F. Kennedy. In this unique account, he describes each of the participants during the sometimes hour-to-hour negotiations, with particular attention to the actions and views of his brother, President John F. Kennedy. In a new foreword, the distinguished historian and Kennedy adviser Arthur Schlesinger, Jr., discusses the book's enduring importance and the significance of new information about the crisis that has come to light, especially from the Soviet Union.
