The branch of engineering science that has to do with the behaviour of fluids are understood to include liquid,gases and vapours is called fluid mechanics. Fluid mechanics is a branch of mechanics dealing with the properties of liquid and gases Fluid mechanics has two branches. 1.) Fluid statics, which treat fluid in the equilibrium state of no shear stress. Nature of fluids:-A fluid is a substance that doesn ' t permanently resist distortion.

Fluid mechanics - Chemical engineering student

Description. The book provides all the essential knowledge on the topic of fluid mechanics necessary for chemical engineers. The first part of the book presents the principles of fluid mechanics used by chemical engineers, with a focus on global theorems for describing the behavior of hydraulic systems. The second part deals with turbulence and its applications in stirring, mixing and chemical reactor applications.

Fluid mechanics deals with three aspects of the fluid: static, kinematics, and dynamics aspects: Fluid statics: The fluid which is in state of rest is called as static fluid and its study is called as fluid statics. Fluid kinematics: The fluid which is in state of motion is called as moving fluid. ...

NPTEL :: Chemical Engineering - Fluid Mechanics

Fluid mechanics is the study of fluid behavior (liquids, gases, blood, and plasmas) at rest and in motion. Fluid mechanics has a wide range of applications in mechanical and chemical engineering, in biological systems, and in astrophysics. In this chapter fluid mechanics and its application in biological systems are presented and discussed.

Fluid Mechanics - an overview | ScienceDirect Topics

Fluid mechanics can be sub-divided into Fluid Statics (or Hydrostatics) – the study of fluids at rest – and Fluid Dynamics (or Hydrodynamics), the study of fluids in motion. This course is entitled Fluid Flow, emphasising the issues of fluid behaviour under dynamic conditions, because chemical engineering is concerned

Fluid mechanics is important in chemical engineering because most of the substances that are handled are in the form of a fluid, whether liquid or gas. For instance in a refinery, petroleum and petroleum products are fluids. Fluids have different properties and need to be understood to be able to handle them properly.
