How can I supercharge the therapy I currently use? This volume distills the core principles, methods, and vision of the approach. Each Functional Analytic Psychotherapy (FAP) principle is presented in terms of its intended purpose and is clearly linked to the underlying theory, thus providing clinicians with a straightforward guide for when and how to apply each technique. FAP embraces awareness, courage, and love as integral to the treatment process. Part I of this volume reviews the history of FAP and the basic behavioral principles on which it is based. Part II provides an easy to use step-by-step guide to the application of FAP techniques. FAP is an approach undergoing a renaissance, and this volume uniquely summarizes the full history, theory, and techniques of FAP, resulting in a handbook perfect for clinicians and graduate students with or without a behavioural background.

At present we may be at the cross-roads in the therapeutic approaches we have for the treatment of the 100 or more rheumatic conditions. This is because we now recognise that although some advances have been made with the development of a large range of non-steroidal and steroidal drugs during the past two decades or so, we now recognise that many, if not all, of these have rather limited effects on many of the disease processes which underlie the manifestations of the various rheumatic states. Advances in molecular biology in the past 5-10 years have enabled these tools to be applied extensively for developing further our understanding of the rheumatic disease processes. In some cases these molecular tools (e. g. ,)-interferon, interleukin- 2, T-cell antibodies) have been directly employed as therapies themselves. While the outcome from trials with such agents in rheumatoid arthritis in particular has not been as would have been hoped, these results as with cyclosporin A and low-dose methotrexate in the therapy of rheumatoid arthritis have given us important indications for the approach employing what are generally described as "immunomodulators" to control this disease. But this may not be the same type of approach which is desirable for all types of rheumatic conditions. Indeed, even the way which the present range of drugs and other therapies are applied may not be the most effective and safe means of treating different types of arthritic conditions.
