An industrial plant needs to combine a powered exhaust with a gravity ventilation system. In this case, you will be getting air into a building that doesn't need to have outside elements such as insects, dust or rain to come with the air. In this application, you need to design a system that makes use of inlet louvers. Dampers

Industrial ventilation - EHS DB.com

Industrial ventilation generally involves the use of supply and exhaust ventilation to control emissions, exposures, and chemical hazards in the workplace.

Traditionally, nonindustrial ventilation systems commonly known as heating, ventilating, and air-conditioning (HVAC) systems were built to control temperature, humidity, and odors.

Ventilation requirements of industrial buildings are driven by the manufacturing processes and activities taking place within the facility. Ventilation for ambient temperature control may be dictated by the number of occupants, the process, or the stored materials. The facility may require supplemental cooling, heating, or air cleaning.
