A few years ago I decided to get a hit-and-miss engine. Not being able to decide what to buy, I turned to my machinery and piles of bar stock for the answer. I didn't want a small model but rather a 3 HP-sized machine. After a few pages of sketches I set out to make some chips fly and built a homemade 3 HP hit-and-miss gas engine. Quite a project

A hit-and-miss engine or Hit 'N' Miss is a type of internal combustion engine that is controlled by a governor to only fire at a set speed. They are usually 4-stroke but 2-stroke versions were made. It was conceived in the late 19th century and produced by various companies from the 1890s through approximately the 1940s. The name comes from the speed control on these engines: they fire only when operating at or below a set speed, and cycle without firing when they exceed their set speed. This is

As a hit-&-miss type engine it needs no cooling system and will operate for long periods on a small amount of fuel. Running time is 12 hours on 2 ounces (59cc) of fuel. Even after all day runs the engine only gets slightly warm. The engine is not difficult to build, yet offers some interesting challenges to keep an experienced builder interested.

This design lends itself to compressed air engines of any number of cycles. It ' s particularly useful on hit n miss operated engines, since the exhaust valve will remain open as long as the inlet valve is closed. This allows the engine to turn over multiple times with no back pressure due to compression. Here, the inlet valve is closed. The
