Uniformed Services University of the Health Sciences, Bethesda, Maryland. Concise, synoptic textbook for medical students. DNLM: 1. Nervous System - anatomy & histology.

This volume was generated from papers presented at the Second Triennial Symposium of the International Basal Ganglia Society (IBAGS) held at the University of Victoria, British Columbia, July 21-23, 1986. The meeting was held as a satellite symposium following the XXX Congress of the International Union of Physiological Sciences at Vancouver. IBAGS was founded at a similar satellite symposium held in Lorne, Australia, organized by John S. McKenzie and sponsored by the University of Melbourne. The symposium held in Australia was attended by 50 scientists from 12 different countries. The results of the first symposium, edited by John S. McKenzie, Robert E. Kemm and Lynette N. Wilcock, were published by Plenum Press in 1984 under the title, The Basal Ganglia - Structure and Function. It was decided that the Society should meet on a triennial basis. The time and place for Second IBAGS Symposium were set by A.G. Phillips who served as Chairman of the Program Committee along with I. Divac, S.A. Greenfield and E.T. Rolls and J.S. McKenzie. Michael E. Corcoran of the Department of Psychology, University of Victoria served as the on-site coordinator and arranger for the Symposium. He was ably assisted by Ms. Morag McNeil who handled the details which made the meeting run smoothly.

This innovative textbook is modelled on problem-based learning. It bridges the gap between academic neuroanatomy and clinical neurology and effectively takes the reader from the classroom to the clinic, so that learning can be applied in practice. This second edition has been updated and expanded to include many more clinical cases within both the book and the accompanying Wweb site. This book and the associated Web site will be of practical value to all the professionals who deal with people who have neurological conditions, as well as being invaluable to medical students and residents. This includes physiatrists (rehabilitation medicine specialists), physiotherapists, occupational therapists and speech therapists, and nurses who specialize in the care of neurological patients. We think that this text will also be of value for family physicians and specialists in internal medicine and pediatrics, all of whom must differentiate between organic pathology of the nervous system and other conditions.
