In this instructional work, world-renown channel, seminar leader, sacred site guide, and author Lyssa Royal explores the global shift in consciousness, the inner workings of the human psyche, and the nature of reality in a way that inspires readers to bring more happiness, fulfillment, and self-empowerment into their lives.

A look at the future world order forecasts a dramatic reordering of geopolitical and economic forces, high-tech economies, and a world of privileged elites surrounded by a vast array of impoverished nomads

The Galactic Heritage Cards were first introduced in Japan, where hundreds of Lyssa's students have since used them with profound results. USING THE CARDS: The overall concept of the cards is to explore the journey from unity to fragmentation/polarity and back to reintegration. Since each of us is part of the same one consciousness, this is a holographic "journey" that unifies us all. The card system uses the holographic concept that we are experiencing both unity and separation simultaneously. The components of the cards explore this journey in a variety of ways, including: SPECIES or STAR SYSTEM: Twenty-one different species or star systems are represented in the four suits (or time streams) of cards to symbolize the main archetypal groups who have influenced the development of our galactic family. THEME: Each card has a theme or lesson that is connected to the civilization it depicts. Contemplative text and deeper commentary are presented for each card to help users understand how to apply this wisdom in their current lives. ARTWORK: The architect of these cards, the multidimensional consciousness Germane channeled through Lyssa, also assisted Hong Kong artist David Cow in the channeling of the images. Contemplating the artwork allows more information and energy to be transmitted that goes beyond the text for each card. The art works deeply with the subconscious and adds a powerful dimension to the user's inner work with the cards. In addition to the individual card art, an underlying image spans all the cards when they're laid out on a grid with 18 cards per row. This image represents our journey back to integration, and thus each card carries an embedded energy of unity even within the uniqueness and "separate journey" of each card. When the final card was channeled, the total number was 108 -- a sacred number in many traditions that reflects the idea of wholeness and completion. GETTING STARTED: In the accompanying booklet we offer more information, the text and commentary for each card, and several recommended spreads to help you get started.

The Millennium Development Goals, adopted at the UN Millennium Summit in 2000, are the world's targets for dramatically reducing extreme poverty in its many dimensions by 2015income poverty, hunger, disease, exclusion, lack of infrastructure and shelterwhile promoting gender equality, education, health and environmental sustainability. These bold goals can be met in all parts of the world if nations follow through on their commitments to work together to meet them. Achieving the Millennium Development Goals offers the prospect of a more secure, just, and prosperous world for all. The UN Millennium Project was commissioned by United Nations Secretary-General Kofi Annan to develop a practical plan of action to meet the Millennium Development Goals. As an independent advisory body directed by Professor Jeffrey D. Sachs, the UN Millennium Project submitted its recommendations to the UN Secretary General in January 2005. The core of the UN Millennium Project's work has been carried out by 10 thematic Task Forces comprising more than 250 experts from around the world, including scientists, development practitioners, parliamentarians, policymakers, and representatives from civil society, UN agencies, the World Bank, the IMF, and the private sector. Coming to Grips with Malaria in the New Millennium presents an innovative strategic framework for relieving the burden that malaria imposes on society through the implementation of tried and tested anti-malarial interventions designed to improve health nationally and to promote economic development locally. Recommendations include early diagnosis, treatment with effective anti-malarial medicines, the use of insecticide treated nets, indoor residual spraying, managing the environment, improving housing, extending health education and improving monitoring and evaluation systems.

The papers included in this volume represent just such an effort to lay a firmer foundation for this continuing dialogue and to bring together different points of view. In October 1998, the Strategic Studies Institute, assisted by Pepperdine University, assembled a distinguished group of analysts from the United States, Europe, and the Middle East, in Florence, Italy. At a conference titled "Mediterranean Security into the Coming Millennium," the task of the participants was to address current regional security issues in the Balkans, Middle East, and the Aegean, as well as the perceptions of the individual states, the relevant security organizations, NATO and the European Union, and the players and major external actors like the United States and Russia. These papers cover the many areas discussed at the conference and should advance the debate on Mediterranean security both in the United States and abroad.

Tomorrow's America is a cold and ravaged place, a nation devastated by despair and enduring winter. In a small New England city, senior government official Dr. Judith Carriol finds the man she has been seeking: a deliverer of hope in a hopeless time who can revive the dreams of a shattered people; a magnetic, compassionate idealist whom Judith can mold, manipulate and carry to undreamed-of heights; a healer who must ultimately face damnation through the destructive power of love.

This three-volume set details the essential roles that small telescopes should play in 21st century science and how their future productivity can be maximized. Over 70 international experts have created a definitive reference on the present and future of "big science with small telescopes".
