This book highlights the approaches for achieving trans-disciplinary research integration for semi-arid dryland agriculture systems under changing climates, while also identifying the elements of a collaborative research agenda that are needed to advance global food security. The book emphasizes climate change being a reality and how drylands are bearing the brunt in diverse ways. The major impact of dryland agriculture is on communities that need to: avoid the short- and long-term impacts of the changing climate; adapt strategies that can minimize these impacts; and be able to mitigate climate change, for which they need climate smart interventions. These interventions are only realized through knowledge and experience sharing among stakeholders from different sectors and backgrounds. It is in this context that the publication was seen as a necessity in order to bring together ideas that will transform lives and build adaptation capacities, thereby providing the much-needed products in communities leading to development.

Zimbabwe's land reform has been intensely controversial. Yet debate has been plagued by bias and misinformation. These cover agricultural and livestock production, the economy, political dimensions, land, livelihoods and rural development, aid and development, comparative lessons and researching land and agrarian change. This book offers the first detailed scholarly examination of the nation-wide land occupations which spread across the Zimbabwean countryside from the year 2000, and led to the state ' s fast track land reform programme. In an innovative way, it highlights the decentralized character of the occupations by recognizing significant spatial variation around a number of key themes, including historical memory, modes of mobilization and gender. A case study of the land occupations in Mashonaland Central Province, based on original research, adds empirical weight to the argument. In further identifying and understanding the specificities and complexities of the land occupations, the book also frames them by way of a nuanced comparative-historical analysis of the three zvimurenga. It thus examines the land occupations (referred to, likely controversially, as the ' third chimurenga ') with reference to the original anti-colonial revolt from the 1890s (the first chimurenga) and the war of liberation in the 1970s (the second chimurenga). Further, the book engages critically with the ruling party ' s chimurenga narrative and the hegemonic understanding of the land occupations within Zimbabwean studies. This book is a crucial read for all scholars and students of post-2000 land and politics in Zimbabwe, but also for those more broadly interested in historical-comparative analyses of land struggles in Zimbabwe and beyond.
