This guide presents recommendations for materials, analysis, design, and construction of concrete-pedestal elevated water storage tanks. Both the all-concrete tank and the composite tank, consisting of a steel water storage vessel supported on a cylindrical reinforced concrete pedestal, are included. Concrete-pedestal elevated water storage tanks are structures that present special problems not encountered in typical environmental engineering concrete structures. This guide refers extensively to ACI 350 for design and construction of those components of the pedestal tank in contact with the stored water, and to ACI 318 for design and construction of components not in contact with the stored water. Determination of snow, wind, and seismic loads based on ASCE/SEI 7 is included. These loads will conform to the requirements of national building codes that use ASCE/SEI 7 as the basis for environmental loads or conform to the requirements of local building codes. Special requirements, based on successful experience, for the unique aspects of loads, analysis, design, and construction of concrete-pedestal tanks are presented.

This edited volume addresses the main lessons and legacies of the 1962 Cuban Missile Crisis from a global perspective. Despite the discoveries of recent research, there is still much more to be revealed about the handling of nuclear weapons before and during the Cuban Missile Crisis (CMC). Featuring contributions from a number of eminent international scholars of nuclear history, intelligence, espionage, political science and Cold War studies, *An International History of the Cuban Missile Crisis* reviews and reflects on one of the critical moments of the Cold War, focussing on three key areas. First, the volume highlights the importance of memory as an essential foundation of historical understanding and demonstrates how events that rely only on historical records can provide misleading accounts. This focus on memory extends the scope of the existing literature by exploring hitherto neglected aspects of the CMC, including an analysis of the operational aspects of Bomber Command activity, explored through recollections of the aircrews that challenge accounts based on official records. The editors then go on to explore aspects of intelligence whose achievements and failings have increasingly been recognised to be

of central importance to the origins, dynamics and outcomes of the missile crisis. Studies of hitherto neglected organisations such as the US Defense Intelligence Agency (DIA) and the British Joint Intelligence Committee (JIC) both extend our understanding of British and American intelligence machinery in this period and enrich our understanding of key episodes and assessments in the missile crisis. Finally, the book explores the risk of nuclear war and looks at how close we came to nuclear conflict. The risk of inadvertent use of nuclear weapons is evaluated and a new proposed framework for the analysis of nuclear risk put forward. This volume will be of much interest to students of intelligence studies, international history, foreign policy, security studies and IR in general.
