Solutions To Problem

Set 1

By Axiom 1:4, for each

File Type PDF Solutions To

Problem Set 1
m \in \mathbb{Z} , there exists an integer m such that $m + (m + x) = 0$: By adding m to both sides of

Equation 0.1, we get $(m + x) + (m + x) = (m + x) + m$:

The right hand side of the equation is 0 as explained above. For the left hand side, we have $(m + x) + (m + x)$ Axiom 1 = $(m + m) + (x + x)$ (ii) $m + m = 0$ + $x + x = 2x$: Hence, $x = 0$. Problem 4.

Math 5311 – Problem
Set #1 solutions January
29, 2009 Problem 1:

4.2.4 Part (a) For what
values of b is the matrix
 $A = \begin{pmatrix} 1 & b \\ b & 4 \end{pmatrix}$ positive
definite? The simplest
way to proceed is to
check the eigenvalues:
 A will be PD iff all
eigenvalues are positive.
The eigenvalues are the
roots of $\det \begin{pmatrix} 1-\lambda & b \\ b & 4-\lambda \end{pmatrix} = 0$

1 p $2\sqrt{e^x + y^2} \cdot dx$

File Type PDF Solutions To

$$= \frac{1}{\sigma^2} e^{-\frac{(y-\mu)^2}{2\sigma^2}}$$

$\frac{1}{\sigma^2} = N(\mu, \sigma^2)$ The

integral goes to 1

because it is of the form

of a probability

distribution integrated

over the entire domain.

To find $p(x|y)$, divide

$p(x,y)$ by $p(y)$: $p(x|y) =$

$$\frac{p(x,y)}{p(y)} = \frac{1}{\sigma^2} e^{-\frac{(x-y)^2}{2\sigma^2}}$$

$$= N(y, \sigma^2)$$

Finding $p(x)$ and $p(y|x)$

follows essentially the

same procedure, but the
