This is the third and last book of a series on the BMW 3-series. It is car that defines the sport sedan. This book covers the fifth and sixth generations of cars, the E90 and F30. Both generations are very controversial. With the E90, thanks to the chief designer, Chris Bangle, there were boldly aggressive changes to the iconic design. The iDrive interactive system confused many a driver. Even the supercar, the M3, had a V8 engine, which for many folks was like putting a moustache on the Mona Lisa. Despite all of this, the 3-series grew and grew in popularity. Plus, the magic drivability of the car remained in its DNA. For the present F30 generation, BMW split the 3-series right down the middle. The everyman's cars, the sedan and wagon remained with the 3-series. The coupe and convertible, now part of the new 4-series, are closer to the roots of the brand. BMW tries to conquer all the small luxury car market with new unusual models and engines, unthought-of until very recently. As the car world awaits the seventh generation of cars, here is a review of the most review ones.

Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs, wishes and characteristics of the user. In this context, the concept of the human-machine system has become established. In a systematic way and with a detailed view of the complicated technical and perceptual psychological and methodological connections, this book explains the basics of automotive ergonomics with numerous examples. The application is shown in examples such as package, design of displays and control elements, of environmental ergonomics such as lighting, sound, vibrations, climate and smell. The design of driver assistance systems from an ergonomic perspective is also a central topic. The book is rounded off by methods of ergonomic vehicle development, the use of mock-ups, driving simulators and tests in real vehicles and prototypes. For the first time, those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today's automobiles. This provides planners and designers of today's automobiles with concrete information for ergonomic product development, enabling them to keep an eye on decisive requirements and subsequent customer acceptance. This book is a translation of the original German 1st edition Automobilergonomie by Heiner Bubb, Klaus Bengler, Rainer E. Grünen & Mark Vollrath, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2015. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.
