The Dynamic Websites – Server-side programming topic is a series of modules that show how to create dynamic websites; websites that deliver customised information in response to HTTP requests. The modules provide a general introduction to server-side programming, along with specific beginner-level guides on how to use the Django (Python) and Express (Node.js/JavaScript) web frameworks to create basic applications.

Server-side website programming - Learn web development | MDN
Server-side code can be written in any number of programming languages — examples of popular server-side web languages include PHP, Python, Ruby, C#, and NodeJS (JavaScript). The server-side code has full access to the server operating system and the developer can choose what programming language (and

specific version) they wish to use.

Web Server Tutorial - Quackit
Server-side scripting is a technique used in web development which involves employing scripts on a web server which produce a response customised for each user's request to the website. The alternative is for the web server itself to deliver a static web page. Scripts can be written in any of a number of server-side scripting languages that are available. Server-side scripting is distinguished from client-side scripting where embedded scripts, such as JavaScript, are run client-side in a web bro

Server-side scripting - Wikipedia
Web server Run the code below to start a custom web server. To create a custom web server, we need to use the HTTP protocol. By design the http protocol has a "get" request which returns a file on the server.
